Profile

Product Engineer with hands-on experience in debugging, system optimization, and building real-world applications. Skilled at identifying and resolving technical issues, improving performance, and enhancing product workflows. Experienced across frontend, backend, and database systems, delivering reliable solutions that support both users and business outcomes.

Professional Experience

Product Engineer, COMCON Software Solutions, Delhi

Oct 2025–Present

○ **Application Workflow Lead — Doordarshan (2025)**

Delivered a 2-day training to 60+ Doordarshan engineers on installation, troubleshooting, and application workflow. Redesigned documentation & videos, reducing support queries by 40%.

- Building a complete B2B order workflow with inventory checking, UPI payment, and delivery scheduling based on customer location.

Software Developer, COMCON Software Solutions, Delhi

Dec 2024–Oct 2025

- Designing and developing an in-house UPI-based payment system integrating frontend, backend, and database, without relying on third-party APIs.
- Resolved UI delay issues by implementing a queue system, ensuring WebSocket messages are processed efficiently without freezing the UI.
- Reduced main thread workload by registering only the last user action, fixed UI bugs, handled edge cases, and minimized unnecessary function calls, achieving a 10% speed boost and 15% overall performance improvement.
- Developed an RTF to HTML converter as a separate module in Android Java, ensuring that the conversion runs in the background without blocking the UI thread.
- Created an automated Python-based email processor that handles incoming messages, monitors key generation, and emails generated keys with attachments to users.

Product Experience

Product Engineer (Independent) — Ridiviaanh

Feb 2026–Present

- Built a trek booking platform with dynamic slot-based availability, group pricing, and multi-step booking flow.
- Designed admin-controlled scheduling system to manage cancellations, weather risks, and operational constraints.
- Architected database for treks, scheduled runs (date-based slots), bookings, members, and notifications.
- Implemented "Notify Me" system to capture demand and trigger user engagement.
- Owned end-to-end execution including Razorpay integration, UI/UX, and operational business logic.
